

#### Investment ideas, Stocks,

Porsche (PAH3 GY) is a popular global premium-class carmaker. A Volkswagen Group company, it holds majority stake in its parent (about 53% of VW's equity). Porsche recently entered e-mobility market with its all-electric Taycan model.

| Company                    | PORSCHE    |
|----------------------------|------------|

### Key investment attractiveness factors:

- 1) **Share in VW provides more opportunities.** Porsche is a Volkswagen Group company. However, by way of cross holding, it holds majority stake in its parent which amounts to about 53.3% of VW's equity.
  - In addition, Porsche's Balance Sheet for Q3 2020 reflects VW's shares for \$38.3 billion (estimation based on Balance Sheet). If this asset is valuated considering VW's current market capitalization, its value will be \$54.3 billion, with Porsche's market capitalization being about \$21 billion. This means the company's market value is about 2.6 times lower than market-based value of Balance Sheet assets.
- 1) **Dividends are among sector's highest.** Apart from the fact that VW as parent entity pays fairly good dividends with annualized return in EUR about 3%, Porsche remunerates its shareholders too. According to Bloomberg, the company's 12-month dividend yield is around 3.9% p.a. in EUR. This is a fairly high level.
- 2) E-mobility market entry. Porsche develops this business area rapidly intending to compete with Tesla. In 2020, it launched Taycan and Macan all-electric models. Additionally, the company produces a broad range of hybrid cars which allows it to comply with new onerous emissions laws. Based on these indicators, Porsche is ahead of Ferrari in e-mobility business, and new models may lay foundation for stable growth in China, one of the world's largest markets.
- 3) **Discount for P/E is over 60%.** Porsche's high net profit arising due to earnings from affiliates (VW in this case) leads to company's shares being traded substantially cheaper than benchmarks with reference to P/E multiplier. According to our estimates, discount is over 60%.

**Key risks.** 1) Tight competition expected in electric car production sector. 2) Crisis developments worldwide which can decrease purchasing power in premium-class car segment.
